Copious rainfall has created exceptionally favourable seasonal conditions over practically the whole of the sheep and dairying districts while causing some damage to property and to wheat harvests.

### 2. WOOL.

Receipts of wool in the current season to date are 11 per cent. less than the record totals of the corresponding months last year. Exceptionally large clearances have been made at auctions in a market which has risen by 112 per cent. above the average greasy price of the past three seasons.

The course of wool prices is shown in Table 24. The average price realised for greasy wool sold at Sydney auctions in the latter half of 1933 was 14.3d. per lb. as compared with 8.4d. per lb. in the corresponding period of 1932.

The total quantity of wool received in Sydney in the current season (1st July, 1933, to 12th January, 1934) was 1,010,971 bales compared with 1,140,669 bales in the corresponding period of last season.

### 3. WHEAT.

Pending final returns the interim total of the crop harvested in the State in 1932-33 is estimated at 78,389,000 bushels. The estimated area sown with wheat for grain and hay in New South Wales in the season 1933-34 was 4,838,000 acres. A forecast (4th November, 1933), by the Director of Marketing, was that the crop would be 49,046,000 bushels, adverse seasonal conditions having affected crop prospects subsequent to the first forecast. The carry-over of wheat and flour in stocks in New South Wales as at 29th November, 1933, is estimated at 5,900,000 bushels compared with 2,640,000 bushels at the corresponding date in 1932, and an average of 5,300,000 bushels in the three preceding seasons.

The course of wheat prices is shown in Table 24. Comparatively small sales were effected in December on account of the weakness of the market and small volume of inquiries. Continued lag in exports is anticipated in the immediate future.

### 4. BUTTER.

The production of butter in 1932-33 was a record, which appears likely to be exceeded in the current year.

December ... ..	14,301	...	6,669	8,139	272,102	312,415

The course of butter prices is shown in Table 24. After a collapse extending from September, 1932, to April, 1933, the London butter market revived temporarily, but collapsed again in October, 1933, and continued to weaken. Export sales parity (Sydney) on 11th January, 1934, was 66s. per cwt. compared with 88s. per cwt. a year previously. Production in November, 1933, was the highest recorded for any month in New South Wales the previous record being 14,643,000 lb. in December, 1924.

## 5. COAL.

The quantity of coal raised in 1933 is estimated by the Department of Mines to be 7,065,000 tons compared with 6,784,000 tons in 1932 and 6,432,000 tons in 1931.

\* State Government banking transactions suspended. Index not ascertainable.

† Exclusive of certain abnormal Government transactions.

Following on a special research, the index has been revised throughout in order to eliminate the effects of Treasury Bill and other special transactions on behalf of Governments and the effects of bank amalgamations. The amounts of clearings shown are the recorded totals less Treasury Bill transactions only.

The index may be regarded as an approximate measure of changes in the volume of business transactions settled by cheques provided it is considered in conjunction with changes in price levels. The index represents the ratio of each month's clearings to the average for the month concerned during the five years 1926–1930. This average is represented by 100 each month. Seasonal fluctuations have thus been eliminated. Casual fluctuations in monthly index numbers have been smoothed out by taking a three months' moving average, that is, the index shown above for each month is the average of the actual index of that month and the preceding two months. It may be compared vertically or horizontally.

No adjustment has been made for normal growth or change of price levels.

1933	...	...	1,328,685	1,057,149	15,194,635	9,605,541

\* Including new mortgages and renewals as registered.

The above comparison is affected by a decline in property values. Figures for individual months are shown in Table 49 of the Statistical Bulletin of New South Wales for September Quarter, 1933.

NOTE.—Mortgages and liens in some instances secure fluctuating advances, the amount of which is not recorded in the legal instruments. The amounts shown relate substantially to mortgages of fixed amounts for fixed periods, and exclude fluctuating advances (such as overdrafts) secured by mortgage. Mortgages providing collateral security of subsisting mortgages are included.

22. STOCK EXCHANGE INDEX (SYDNEY).

The following index of the values of the principal Company shares on Sydney Stock Exchange embraces the ordinary shares of companies (excluding banking companies) whose business is conducted wholly or largely in New South Wales.

The prices of individual shares are unweighted, and the group averages are the means of the average monthly prices per £ of paid-up capital. The aggregate index is the average for the whole of the shares included in the groups with the addition of 24 miscellaneous shares. It represents the ratio of the average prices of ordinary shares to their par values.

Par Value of Shares = 100.
